## ADI Delivers Real-time Management Tools with Maximum Up-time

### How Can ADI Help You?

**Do you ever have to search for inventory in your warehouse?**

- With ADI, you will gain immediate visibility to current inventory location and quantities

**Do you ever make strategic decisions based on out-dated information?**

- ADI delivers inventory management solutions that drive out inefficiencies and provide real-time management tools

**Do you ever have unhappy customers due to late or partial shipments?**

- ADI will help you have validation of put-away, picking, and shipping accuracy

**Do you ever assign resources for physical inventory counts?**

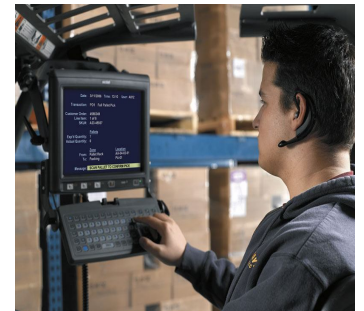

- With ADI, you will eliminate the need for annual physical inventory

**You will experience rapid implementation in days not months and Return on Investment (ROI) in twelve months or less.**

*“ We have found Adaptive Data Interchange to be spot on with respect to advice for the best solution to our needs...not the best sale for them. We have found them to be very customer centric, have great ties to equipment manufacturers and able to deliver products to us within days rather than weeks. This is very important to us as a Global company. They have even been able to find sources for products in other countries for us.”*

- Eric P., Global MIS Manager

**ADI provides complete data collection and inventory management solutions for the manufacturing shop floor and warehouse that drive out inefficiencies, provide real-time management tools, and improve customer satisfaction. The ADI turnkey program ensures you get a delivered, implemented solution with maximum up-time and minimal headaches. We leverage proven and rugged technology to collect, measure, and manage data to drive profitability in your manufacturing fabrication, and warehouse operations. Let the experts at Adaptive Data Interchange revolutionize your business!**

**Call today to schedule your business process review and find out what hundreds of companies already know...ADI provides unmatched reliability, simplicity, and flexibility for inventory management and data collection needs.**
