Manufacturer Profits with ADI: Improves Productivity and Asset Utilization

How Can ADI Help You?

Are you sure you have accurate job costing for each operation?

- With ADI you will gain immediate understanding of actual direct and indirect job costs

Would you benefit from better asset and labor utilization?

- ADI can help you have a better understanding of asset utilization to better manage capital expenditures

Does your front office have real-time visibility to shop floor operations?

- ADI will help you manage productivity against established and accurate metrics as well as real-time access to customers' job status

Does inaccurate component and parts inventory cause production delays and customer service issues?

- ADI can assist you with full lot traceability that provides 100% accountability for customer service

Would you like a 100% guarantee that the right parts and material are used for every job?

- With ADI you will benefit from full validation of raw materials through finished goods

Our company produced the same job for a customer for several years without knowing we were losing money every order. Once the ADI shop floor system was installed, we were able to capture accurate job costing and change our production method in order to run this job profitably.

Michael C. - Cincinnati, OH
