ADI Improves Productivity and Asset Utilization in Economic Downturn

How Can ADI Help You?

Does inaccurate component and parts inventory cause production delays and customer service issues?

- ADI will improve inventory accuracy with direct put-away and picking cycle counting
- ADI will provide more accurate productivity data which improves quoting accuracy and focus on profitable jobs
- Automation virtually eliminates data entry errors and duplication of effort

Do you know that the right parts and materials are used for every job?

- ADI will help you validate the right components are picked every time
- Production and packing line material and labor tracking will improve
- Automation will benefit receiving and put-away

Do you ever have unhappy customers due to late or partial shipments?

- Inventory accuracy virtually eliminates surprise stock-outs and rush shipments
- Automation will improve shipping and EDI integration

Why Choose ADI?

With over 25 years expertise in bar coding and data collection solutions, ADI delivers everything you need to measure, manage, and drive profitability on your shop floor and in your warehouse. Efficient collection and processing of real-time transaction data is the key to understanding the best opportunities for improvement within any organization. We provide the lowest Total Cost of Ownership (TCO) solution and guarantee immediate return on investment. Contact us today to see how we can help you automate your recovery.
