

DIRECT PART MARKING

adaptive
data inc.

ADI Can Help You Meet All of Your DPM Needs

How Can ADI Help You?

Are your products too unique to be compatible with a standard barcode label?

- With the cab fiber laser, any mark you need can be made directly onto your products, right on the production line!

Do you need a UID solution for your DoD products?

- The fiber laser we supply is capable of UID marking on virtually any material

Have other DPM laser systems failed you in the past?

- You can trust ADI and cab Technology to give you the quality system and the customer support no other supplier can deliver

Customer Review

What makes cab Technology an ideal choice for all of your direct part marking needs?

cab builds every part of every laser system themselves; therefore, they have complete control over the hardware, software, and electronics that are used for each and every one of their products.

The components of the FL10 and FL20 fiber lasers are truly top-of-the-line quality. cab will never cut corners on the design of the system or the manner in which it is manufactured. They use the best laser source (IPG) and optics available on the market today. cab even offers a version of the laser that does not require the use of a PC to run, which is especially beneficial if the unit will be integrated in an automated production line.
